Safe Neighborhoods Smoke Alarm Project

In 1960, fire caused the death of 7,645 people in the United States. In 1969, smoke alarms became available to the average American. In 2014, there were 3,275 fire deaths in the United States. Along with public education, stricter building codes, and fire sprinklers, smoke alarms have helped save many lives. There are still far too many people dying from fires. The Grand Traverse Metro Fire Department is committed to preventing injury and death in our communities by providing and installing smoke alarms to those in need. If you are in need of smoke alarms or would simply like firefighters to perform a check of your existing alarms simply fill out the information below and return to any fire station listed or mail to the administrative offices at the address below.

Teams of firefighters will schedule a home visit and check for the presence of properly operating smoke alarms and repair and/or replace as needed. Homes in need of smoke alarm installation or replacement will receive alarms to be installed by firefighters at **no cost** to participants.

Your completion of the following short survey will help us achieve this goal and help us to collect data for fire safety initiatives in our community.
